

Pocket pH Tester from HANNA

HI-98107

Pocket-sized testers at pocket money prices

Key Features

Protective cap doubles up as measurement cup

Calibration screwdriver & instructions

Bigger LCD display for clear precise readout

150 hours battery life

Product Uses

Swimming pools

Education field trips

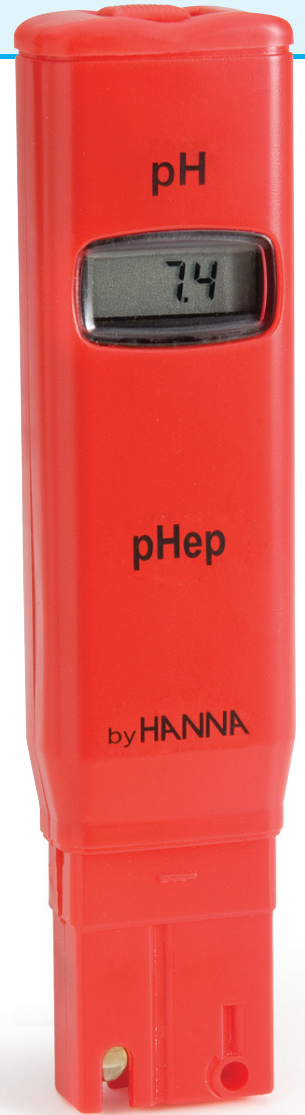

Koi keeping

Quick indicator or good back up in the lab

Making it quicker and easier to take quick-fire measurements this pocket-sized pHep from Hanna allows the user to simply dip the tester into a solution and take a reading. Useful features include an easy read digital display, rugged and ergonomic casing and long battery life.

Hanna introduced the world's first pocket pH meter in 1986 – revolutionising pH measurement and doing away with the need for litmus testing. Today's pHep is the result of over two decades of continuous research and development.

Main Benefits

- Easy dip and read design
- Clear display giving pH to 0.1 resolution
- Non-clogging fibre junction increases life-span; simply pull out 1-2 mm of the junction fibre to completely renew the junction
- Spare electrodes and range of buffer solutions available
