

Illuminated Magnifiers, Luxo®

Supplier: Luxo

Click to enlarge

Designed for visual accuracy and precise viewing. The 3- or 5-diopter, 12.7cm (5") diameter biconvex ground glass lens is mounted in a die-cast, aluminum-alloy shade attached to a spring-balanced arm. The lightest touch glides the light to any needed position, without any tightening devices. An electronic ballast and RFI filter makes magnifiers energy-efficient, providing 15% more light output. Magnifiers come with one 22W circline fluorescent bulb. Equipped with an "instant on" switch; no "hold down" required to turn light on.

Magnifiers with clamp have an arm reach of 114.3cm (45"), while the magnifiers with base have a 76.2cm (30") arm reach. Color: light gray.

Magnifiers with clamp also feature an "AH" bracket that raises the arm 5.1cm (2") off the mounting surface for maximum freedom of movement. Bracket requires only 0.64cm ($\frac{1}{4}$ ") of clearance between adjacent objects.

The 22W fluorescent replacement bulb is compatible with all Luxo magnifiers.

Ordering Information: Clip-on auxiliary lenses that increase magnification to 7 or 11 diopters are available via special order; contact your VWR sales representative for more information. Replacement bulb sold separately.

For 115V, 60Hz. UL and C-UL listed.
