3B Scientific® Skeletons – Value for Money

When choosing a skeleton model, you are bound to find considerable differences with regard to quality and price. A cheap skeleton may seem appealing to your budget, but does it also offer you reliable quality and attention to anatomical detail? Is it free of chemicals to ensure that you and your pupils, students, staff or patients are not subjected to any hazardous substances? Will it serve you well for many, many years or will you need to buy a replacement after only a few months? Before making your purchase decision, please consider the following points:

- All 200+ bones are represented, even the hyoid and the styloid process
- A natural cast with true to original surface structure
- The teeth are individually modelled and inserted
- The arms and legs can be easily removed and reattached
- The skull can be disassembled and reassembled with ease
- Includes all subcranial openings
- The eye sockets are naturally shaped and the optic canal is portrayed
- The cartilage of the ribcage is hard wearing and robust
- The ribcage is assembled robustly and will not collapse on itself
- The materials used are high quality and durable
- All metal parts are made of stainless steel
- The model is safe and toxicologically harmless

Our range of true-to-original 3B Scientific® skeletons made of unbreakable plastic fulfils all of these demands. We grant you a three year warranty for that and the promise that every one of our skeletons is a high quality product with an outstanding price performance ratio. 3B Scientific not only promises quality on paper, but has made it the measure of all actions – ISO 9001:2008 certified and tested by independent auditors.
