With Otolaryngoscope Adaptor

With Otolaryngoscope Adaptor and Disposable Speculum

With Nasal Speculum Plastic

With Nasal Speculum with Screw

The Timesco Xenon powered Orion Diagnostic sets are available in various cases and contents combinations to enable you to purchase only the items you require and not additional items which you do not. This can result in considerable cost savings!

In this publication we have illustrated both standard dry cell battery sets and also rechargeable sets. The rechargeable sets contain the same components as the standard sets except that they have a rechargeable handle, identified with a dark red band. The catalogue number and description on the rechargeable sets has been coloured red for ease of identification.

OTOSCOPE SETS. XENON.

Many Orion Otolaryngoscope and Diagnostic sets are supplied with disposable Otolaryngoscope speculum connectors. The inexpensive disposable speculums are particularly useful in messy aural examination or whenever cross contamination is an issue.

Zipper and soft pouches sets are the ultimate in portability, as they can be inserted in even the smallest of pockets! Hard cases are designed

with easily removable recessed soft foam inserts, which allows addition of extra components as required.
