

- The size you've asked for is here!
- A 20-liter water capacity spawning system that allows you to collect thousands of embryos based on your research needs.
- Fits on a benchtop. Easy to use.

iSPAWN-S

Because you've asked for it!
Designed to efficiently collect a
large number of synchronized
Zebrafish embryos in brief and
defined windows of time, and with
minimal labor and space.

AQUATIC SOLUTIONS

TECNIPLAST
innovation through passionSM

- **Synchronized embryo collection that suits your needs**

The NEW iSpawn-S is a 20-liter water capacity spawning system that allows researchers to breed the fish and collect embryos in batches of thousands at a time.

- **Natural Spawning Behavior**

iSpawn-S capitalizes on the fish's natural tendency to spawn in shallow water. The innovative design promotes mating behavior that results in intense burst of embryo production.

- **Easy to Use**

Males and females are sequentially added to the system in the evening and kept separated by a divider. The next day, when the embryos are desired, the divider is removed and the spawning platform is lifted to initiate the spawning

The iSpawn-S features a size and shape that conveniently fits on a bench top, has great ergonomics, and is easy to use and maintain.

- **Scientifically Proven**

iSpawn-S has been successfully tested in the most active zebrafish labs in the world by experts in the field.

- **Animals Under Control**

iSpawn-S is completely transparent for maximum visibility facilitating animal inspection.

- **Flexible Solution**

The system's multiple configurations allow the operators to produce embryos in batches based upon their needs. The embryos can be produced in large or small quantities depending on whether the research focuses on cellular, genetics, physiological, behavioral or toxicological studies.

The iSpawn-S completes the Tecniplast product line of Zebrafish breeding systems, making this the largest offering in the market.
