

IMS Mini-OP Table

Designed specifically for operative work in small animals, the IMS Mini-OP Table tilts in any direction to ensure the patient is always presented to the best advantage. A choice of two tops is available. One contains slots to accommodate uprights so that additional equipment can be used.

The table top stands 150 mm above the base and can be height adjusted for user comfort. It is manufactured in lightweight, non-absorbent PVC, which retains heat and therefore helps to maintain body temperature. The metal base has non-slip feet.

Accessories supplied with the IMS Mini-OP Table:

- **Crocodile Clips** (4 supplied): They are used to secure the animal during necropsy. 150 mm long ball chain and connector are included.
- **Retractors** (6 supplied): These stainless steel rods measure 50 mm in length. They can be bent into the desired shape. 150 mm chain and connector included.
- **Edge Clamps** (6 supplied): They can be clamped around the edge of the table to accommodate retractors and crocodile grips.
- **Uprights** (2 supplied): They fit into the table slots to provide a 5 mm diameter bar to which equipment can be attached.
- **Bossheads** (2 supplied): They are used with the uprights and are made from tough plastic with nylon screws.
- **Rod** (1 supplied): It is useful for positioning equipment precisely where it is needed. The edge clamps can be fitted to the rods to give greater flexibility of use. They are manufactured in stainless steel and measure 200 mm long and 5 mm in diameter.

Biopsy Ear Punch

The New Biopsy Ear Punch, from Harvard Apparatus, has a dual cutting edge that cuts rather than tears, causing minimal trauma.

Making this an ideal tool for biopsy collection from or marking of laboratory rodents ears. It is available with or without handy tube holder allowing hands free sample collection. Different gap sizes are available for mouse (1.5 mm) and rat ears (2.5 mm).
