

Water Distillation Unit - Double Unit

The Distillation unit is composed of mild steel powder coated body with borosilicate glass support to perform distillation of water in a double unit based working procedure. The high grade material construction with varied functional features makes it highly portable and easy to use equipment to allow efficient water distillation.

Specifications

Parameters	Values
Main Body	Mild Steel Powder coated
Glass	Borosilicate
Heater Load	1 KW Each
Heater material	Ceramic with Spiral element
Heater Tube	Quartz / Silica Glass
Double Distillation Unit Output	1.5Litre/Hr,3.5Litre/Hr
